                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    receptors. It contains a number of phosphorylation sites in common with IRS-1, showing the 2 proteins to be related. IRS-2 can be obtd. e.g. by affinity purification from insulin-stimulated FDC-P2 cells using immobilized SH2 domains of p85, or can be expressed in transformed host cells carrying an encoding cDNA sequence (AAT28293). Cells or animals having the IRS-2 transgene can be used to study insulin-related disorders, e.g. type II disabetes. IRS-2 can be used to raise antibodies and for drug

CC The invention relates to a novel method for detecting Adenomatous CC Polyposis Coli (APC) protein in a sample. The method involves CC contacting the sample with antibodies which specifically binds to the CC 2843 amino acid form of the human APC protein, or to a mutant APC Protein, and detecting an APC-antibody complex. Mutations in the APC CC gene play a role in tumorigenesis, indicating that it is a tumour CC the FAP (familial adenomatous polyposis) locus. FAP is an autosomal CC duminant inherited disease in which affected individuals develop CC bundreds to thousands of adenomatous polyps in the colon and rectum, CC some of which progress to malignancy. The FAP locus is often found to CC thromosome 5q deletions have also been observed in tumours of the lung, CC breast, colon, rectum, bladder, liver, sarcomas, stomach, and prostate, colon, rectum, bladder, liver, sarcomas, stomach, and prostate, CC serum of the renes such as FER, TBJ, TBJ, and MCC, it is thought that mutations in the APC gene play a key role in the development of FAP and CC serum or a tumour sample. The method is useful for detecting APC protein and its CC genes, and for testing therapeutic agents for the ability to suppress contains. The present sequence represents a 2742 amino acid splice contains call and no acid variant (AMB23011).
                                                                                                                                                                                                                                                                                                                           Query Match 5.9

fetoprotein gene. The DNA encoding this protein may be useful for
the prodn. of biologically active proteins by inserting the DNA into
an expression vector and co-transfecting animal cells with another
expression vector in which a gene for the biologically active protein
is placed under the control of alpha-fetoprotein gene enhancer and

```

```
This protein sequence is as the sequence given in AAR23962 except that Ala at position 2460 is replaced by Val.

This protein specifically binds to the enhancer of the alphafetoprotein gene. The DNA encoding this protein may be useful for the prodn. of biologically active proteins by inserting the DNA into an expression vector and co-transfecting animal cells with another expression vector in which a gene for the biologically active protein is placed under the control of alpha-fetoprotein gene enhancer and
Androgen receptor trapped protein; ART; human; transcriptional coregulatory protein; antagonist;

proteins, regilating androgen-dependent gene expression. To identify proteins that interact with the androgen receptor N-terminus, a modified yeast two-hybrid system that allowed the identification of factors expressed in the prostate and which associated with transcriptional activators was used. An androgen-stimulated LNCap prostate cancer cell cDNA library fused to the LexA DNA binding composition of the co

AAQ72297 is a cDNA isolated from the human adenomatous polyposis coli (APC) gene, it encodes the tumour repressors described in AAR63507 and AAR63508. Determination of alterations in APC or its expression products, can be used for the diagnosis and prognosis of cancer e.g. colorectal, lung and breast tumours; and for determining predisposistion to certain cancers such as familial adenomatous polyposis (FAP) and Gardner's syndrome. The wild type APC gene (or a part of it) can be used therapeutically to restore gene function, while primers and probes derived from the cDNA (AAQ72333-400 and AAQ7244-568) can be used to detect mutations. Also APC proteins or analogues can be administered to compensate for a defective gene, and epithelial cells, or transgenic animals carrying a mutated APC allele are useful for detecting therapeutic agents able to suppress tumorigenesis. 16-JAN-1991; 16-JAN-1991; 16-JAN-1991; 16-JAN-1991; Sequence Claim 3; Columns 71-84; 113pp; English.                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence is encoded by the APC (Adenomatous Polyposis Coli) gene associated with tumorigenesis, found on chromosome 5q.
The sequence may be mutated by deletions insertions, inversions, or point mutations of the gene. The APC gene is expressed in most normal tissues as well suggesting that APC is a tumour suppressor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Detection of somatic and germ-line alterations of human APC - used to diagnose, treat and study familial adenomatosus polyposis and sporadic colorectal cancer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Total number of hits satisfying chosen parameters:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Searched:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence:
 Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Score
